Lauren J. Fowler, DDS

Mount Pleasant, SC,

My husband and I are customers of Dominion Energy and would like to someday implement solar energy in our personal home to do our part to promote this clean, renewable energy source and mitigate effects of climate change. Solar energy reduces our reliance on oil, coal, and natural gas for electricity production. These fossil fuels produce harmful emissions that affect the quality of air, water, and soil, and are responsible for global warming. The net metering tariff being proposed by Dominion Energy would kill the efforts of people who wish to implement this form of renewable energy, negatively affecting the environment and the quality of life of our children.
